Milestone 4 - Value Creation Analysis

This milestone focuses on turning your top ideas into ventures you can analyze and communicate clearly. You will build a **Value Creation Analysis (VCA)** for your top two ideas and bring them to life with mockups that illustrate how they work. Evaluation will be done by your coach in a team meeting.

Milestone Components

- **Value Creation Analysis for Top 2 Ideas**
  Follow the five-step process below to understand and communicate why your venture works:
    - **Step 1:** Draft a *Business Model Canvas* describing your venture.
    - **Step 2:** Identify *points of comparison* — next best options for customers, closest organizations, or analogous industries.
    - **Step 3:** Research *"What's new"* and *"What's old."*
    - **Step 4:** Iterate the demand side — *Will people buy it?* Show that your product or service provides higher surplus (value – cost of ownership) than alternatives.
    - **Step 5:** Iterate the supply side — *Can we make it?* Demonstrate technological and economic feasibility based on evidence and benchmarks.
- **Mockups:** Bring your ideas to life through a visual or interactive representation — for example, a landing page, prototype, storyboard, or short demo. Use AI as your force multiplier for rapid iteration. Figma, Figma Make, Visily, Stitch, or v0 are all good choices.
- **Outputs to Highlight:**
    - Your *Central Business Logic* — "People will buy it because…" and "We can make it because…"
    - Your *Configuration Most Likely to Work* — which wedge or segment you're targeting first
    - Evidence of *pivoting and iteration* as you refine your model

Guidance

- Be concrete: focus on why your venture creates value and how it sustains it.

- Iterate your canvas multiple times — center → demand → supply → bottom line.
- Keep your analysis visual and concise; your goal is insight and **value generation**, not exhaustive modeling and **profit & loss**.
- Use mockups to make your ideas tangible for your coach and stakeholders.

Final Choice: VenueShield AI:

- We are choosing to move forward with VenueShieldAI because we feel that there is a wealth of opportunity in New York City, where large scale events happen daily across the city. It would be much easier to make a name for ourselves in the event planning space. We believe that experimenting in a high density area like NYC will prepare us for the worst.

Value Creation Analysis

Step 1: Draft a *Business Model Canvas* describing your venture.

VenueShield AI (B2B safety and intelligence for social spaces)

Key Partners

- Security cameras and sensor manufacturer
- Cloud service provider
- Venue mgmt. companies (ASM Global)
- Emergency response and public safety agencies
- Insurance companies
- IoT device manufacturer
- System integrations and installers
- Industry associations (ASIS)
- Compliance and regulatory bodies

Key Activities

- AI model development & training
- Real-time data processing & analysis
- Software platform development
- integration with venue system
- customer onboarding & implementation
- continuous monitoring & alerting
- compliance and safety research
- Sales and Marketing
- Raising Money as pre-seed

Key Resources

- AI/ML algorithms and models
- Audio & video analytics tech
- Cloud infra and data processing
- Cybersecurity and data privacy
- Data science and eng team
- Sales and customer support
- Industry partnership team
- Money/ Capital

Value Propositions

- Real time AI safety monitoring and scoring
- Audio disturbance detection
- Crowd behavior monitoring and density tracking
- User feedback and sentiment analysis
- Environmental data monitoring

Unique Offering

- Proactive threat prevention
- Holistic trust system combining intelligence
- Weapon & suspicious activity alerts
- Reduced safety cost & insurance costs
- AI powered compliance checklist

Customer Relationships

- Dedicated account mgmt for large venues
- 24/7 technical support & monitoring
- Regular safety compliance updates
- Training programs for venue staff
- Analytics dashboard & reporting
- Continuous AI model improvements
- Community of venue security professionals

Channels

- Direct B2B sales team
- Industry trade shows & conferences
- Venue management partnerships
- Digital marketing to facility managers
- Integration with venue mgmt systems
- Referrals from venue operators
- Technology partnerships

Customer Segments

- Starting in NYC with dense population and increasing crime rate
- Targeting small events with less than 200 capacity and gradually increasing
- Entertainment venues (concert halls, theatres) (capacity 1000s)
- Sports stadiums & arenas (capacity 1000s)
- Convention centres & exhibition halls (varied capacity)
- Festival & event organizers
- Large social gathering spaces
- Local bars and pubs
- Venue management companies

Cost Structure

- R&D & AI development (Fixed Cost)
- Cloud infrastructure & data storage (Variable Cost)
- Sales & marketing expenses (Variable Cost)
- Customer support operations (Variable Cost)
- Software development & maintenance (Fixed Cost)
- Security & compliance certifications (Fixed Cost)
- Employee salaries & benefits (Variable Cost)
- Hardware integration costs (Variable Cost)
- Legal & regulatory compliance (Fixed Cost)

Revenue Streams

- Subscription-based SaaS model (tiered by v…
- Per-event pricing for seasonal venues
- Installation & setup fees
- Premium features & add-on packages
- Training & consulting services
- API access for custom integrations
- Data insights & benchmarking reports

EventLink - Event Confidence & Shared Experience

Key Partners

- Event venues & halls
- Ticketing platforms
- Event organizers
- Event producers
- Safety tech providers
- Social media platforms
- Payment providers
- Local event platforms
- Content creators
- Transportation services

Key Activities

- Mobile app development
- Community engagement
- User acquisition
- Safety feature dev
- Partnership dev
- Marketing campaigns
- UI/UX optimization
- Raising pre-seed money
- Sales and distribution
- Hiring staff

Key Resources

- Mobile app platform
- User database
- Event data technology
- AI/ML algorithms
- Payment infrastructure
- Communication features
- Venue partnerships
- Engineering team
- Sales and marketing staff
- Money/ Capital

Value Propositions

- Deconstructed Concerts
- Share ticket costs easily
- Reduce event anxiety
- Boost community
- Make events social
- Transform discovery
- Reduce loneliness

Unique

- real time attendee list
- Real-time safety scores
- Support solo attendees

Customer Relationships

- Community building
- Safety features
- Event discovery
- 24/7 support
- User reviews
- Social updates

Channels

- Mobile app stores
- Social media
- Venue partnerships
- University ambassadors
- Word-of-mouth
- Ticketing integrations
- Influencer partnerships

Customer Segments

- Young professionals
- Solo goers
- Solo event attendees
- Concert & festival goers
- New city residents
- Health-conscious users
- Community builders
- Event enthusiasts
- Initially targeting large cities where safety is concern like NYC, Boston
- Starting with small gathering and partnering with event management companies

Cost Structure

Fixed Cost

- Mobile app development & maintenance
- Cloud hosting & infrastructure
- Employee salaries & benefits
- Safety monitoring technology
- Office & operational expenses
- Legal & compliance

Variable Cost

- Customer acquisition
- Payment processing fees
- Partnership revenue costs
- In-app advertising expenses

Revenue Streams

- Premium model subscriptions
- Commission on ticket sales
- Venue partnership fees
- In-app advertising
- Premium features
- Sponsored events
- Data insights (anonymized)
- Group booking revenue share

Step 2: Identify points of comparison — next best options for customers, closest organizations, or analogous industries.

VenueShield AI

Next best options:

- Human-led security & CCTV monitoring
  - Reactive, manual, limited by human attention span.
  - No predictive analytics or proactive alerts.
- Static compliance audits
  - Conducted quarterly or annually; not real-time.
  - Often involve manual checklists and paperwork.
- Insurance risk assessments
  - Conducted post-incident rather than preventatively.
  - No integrated feedback loop into daily operations.

Demand-Side Competitors - Product/Customer need

Company	Focus	Similarity	Limitation / Gap
Evolv Technology	AI-powered weapons detection	Real-time scanning & alerts for venues	Narrow scope – detects metal only
PatriotOne Technologies	Radar + sensor threat detection	Similar IoT + AI approach	Hardware-dependent, not SaaS-flexible
LiveSafe (Vector Solutions)	Crowd-sourced safety reporting app	Safety data aggregation	Not automated or real-time analytics
SAFR (RealNetworks)	Facial recognition for security	AI vision component	Focused on identity, not holistic safety
RiskWatch / Resolver	Compliance & risk management SaaS	Compliance analytics	Not tied to live physical data streams

Supply-Side Competitors - Business Model/Cost Structure

Company	Industry	Similar Business Model Logic	What We Can Learn
Palantir Technologies	Enterprise AI Analytics	High-margin B2B SaaS with per-site contracts	Insight monetization vs. hardware sales
C3.ai	Industrial AI Platform	Modular SaaS, subscription + consulting	Flexible deployment at scale
Verkada	Cloud Building Security	Subscription software over existing cameras	Proven low-overhead IoT model
Datadog / Splunk	Cloud Monitoring & Logs	Usage-based SaaS pricing by data volume	Elastic revenue with strong margins
Zscaler	Cloud Security	Privacy-centric SaaS compliance network	Blueprint for scalable trust-as-a-service

Key Insight:

VenueShield integrates AI sensing, compliance automation, and insurance analytics into one safety-intelligence layer that competitors lack. However, its deep data monitoring could backfire if perceived as invasive or privacy-risking, making transparent and ethical AI design essential.

Competitors focus on one slice; VenueShield integrates across all three.

EventLink Collective

Next Best Options:

- Ticketing platforms (Eventbrite, Ticketmaster) → Transactional, not social.
- Social media discovery (Instagram, TikTok, Facebook Events) → Fragmented, safety-agnostic.
- Group chats / DMs → Used informally to coordinate, no structured visibility or verification.

Demand-Side Competitors - Product / Customer Needs

Company	Focus	Similarity	Limitation / Gap
Eventbrite / Ticketmaster	Event discovery & ticketing	Event aggregation	No social trust or safety context
Fever	Curated experience discovery	Similar millennial audience	Focused on content curation, not community
Meetup	Community-based events	Group creation & coordination	Not optimized for safety or large events
Citizen / Yubo / BeReal	Safety + authenticity social apps	Real-time trust signals	Limited to local or friend groups
Bumble / Hinge	Dating apps with verification	Social verification & trust UI	Narrow use case (dating only)

Supply-Side Competitiors - Business Model / Cost Structure

Company	Industry	Similar Business Model Logic	What We Can Learn
Airbnb	Peer-to-peer Marketplace	Two-sided network, service-fee revenue	Network effects + trust-based growth
Uber / Lyft	Mobility Platform	App-based payments + safety verification	Scalable matching & feedback systems
Fever	Experience Discovery App	Affiliate + commission revenue	Proven event-commerce model
ClassPass	Subscription Experience App	Subscription + pay-per-use hybrid	Predictable recurring revenue
Nextdoor / Reddit	Social Community Platform	Engagement monetization + ads	Scaling trust and community loops

Key Insight:
EventLink unites social trust, shared payments, and safety transparency in one experience that no current platform owns. Yet social-validation features could backfire if visibility or trust scores discourage less-connected users, so privacy and user control must stay central.

No incumbent currently owns this combined experience.

Step 3: Research “What’s new” and “What’s old.”

VenueShield AI

Category	What’s Old (We’re Keeping)	What’s New (Doesn’t Exist Yet)
Demand Side – Product	Proven CCTV + access-control infrastructure; standardized venue compliance checklists; human security review in the loop for high-risk alerts.	Unified AI system fusing **video + audio sensing**, automated compliance scoring, and live insurer integration in one platform.
Supply Side – Business Model	B2B service relationships and multi-venue contracts; subscription-based SaaS pricing; partnerships with insurers and safety agencies.	“Safety-as-a-Service” model where insurance pricing directly adjusts based on VenueShield risk scores — creating a continuous incentive loop between operators and insurers.

VenueShield keeps trusted operational elements — existing CCTV networks and compliance partnerships — but layers new AI-driven analytics and insurance integration on top. On the supply side, it evolves the traditional security-vendor model into a data-subscription ecosystem that links venue performance directly to financial outcomes.

EventLink Collective

Category	What's Old (We're Keeping)	What's New (Doesn't Exist Yet)
Demand Side – Product	Familiar social and event-discovery flows (tickets, RSVPs, recommendations); secure payment and group-split mechanics like Venmo or Splitwise.	**CrowdConfidence™ Score** uniting safety, social trust, and verified attendance into one metric; integrated cost-split + safety transparency in a single UX.
Supply Side – Business Model	Transactional affiliate commissions (like Eventbrite/Fever); freemium entry for users.	Multi-sided **trust-commerce platform** — monetizing verified communities, sponsorships, and data-driven partnerships; viral network growth instead of paid acquisition.

EventLink retains familiar event-discovery and payment experiences that users already trust but adds a unique social-trust + safety layer unseen in existing platforms. Business-wise, it shifts from single-event revenue to a network-effect model that monetizes engagement, credibility, and community.

Step 4: Iterate the demand side — Will people buy it? Show that your product or service provides higher surplus (value – cost of ownership) than alternatives.

VenueShield AI

- **Competitor Comparison**

  People will buy it because VenueShield AI converts safety — once a reactive cost — into a **proactive trust asset** that increases attendance, reduces insurance expense, and strengthens brand reputation.

Dimension	Legacy Approach	VenueShield AI	Value Gain
Response Time	Minutes → Hours (manual detection)	Seconds → Minutes (AI alerting)	+ faster response
Compliance Cost	$50 000 +/ yr manual audits	Less $ / yr on AI subscription	- cost reduction
Reputation Risk	Reactive after incidents	Preventive, transparent dashboards	Brand trust ↑ significantly
Data Utility	Video archives only	Actionable risk & trust insights	Strategic decision support

VenueShield AI delivers a clear **economic surplus** by lowering operational risk and cost while increasing attendance and insurance alignment

$$\text{Net Benefit}_{\text{VenueShield}} = (\text{Operational Value} + \text{Safety Value} + \text{Compliance Value} + \text{Insurance Savings}) - (\text{Subscription Cost} + \text{Integration Cost})$$

$$\text{Net Benefit}_{\text{Competitor}} = (\text{Operational Value} + \text{Safety Value}) - (\text{Hardware Cost} + \text{Maintenance Cost} + \text{Training Cost})$$

- Net Benefit Comparison

  1. VenueShield AI (Our Product)

    - **Assumptions (Typical Mid-Sized Venue)**
      - Avg. annual visitors: 200,000
      - Estimated value of increased trust → attendance uplift: +3–5% (Industry benchmarks: stadium confidence uplift studies & Event Safety Alliance report)
      - Insurance premium per year: $80,000–$150,000 (Mid-size arenas, theatres, convention centers)
      - Operational time spent on compliance/reporting: ~300 hours/year
      - Avg hourly cost (staff/legal/compliance): $45/hour

    We validate these estimates through interviews with venue operators and insurers.

    - **Value Created**
      - Insurance premium reduction (8–12%): $10,000/yr
      - Attendance uplift from trust metrics (3–5% increase): $5,000/yr (Avg $28 per attendee)

        - Operational labor saved (automated reporting): $13,500/yr (300 hrs saved × $45/hr)
        - Incident prevention / legal risk reduction: $3,000/yr

    Estimated Total Value: ~$31,500/year

    - **Costs**
        - Subscription: $12,000/year
        - Integration (amortized): $2,000/year
        - Staff training & workflow changes: $1,000/year

    Total Cost: ~$15,000/year

2. ADT (Home & Commercial Security)
    - **Value Created**
        - Basic operational security and monitoring: $6,000/year
        - Reduced theft/vandalism risk: $2,500/year
        - Lowered staffing/security guard dependency: $3,000/year

    Estimated Total Value Created: ~$11,500/year

    - **Costs**
        - Hardware + subscription: $6,000/year
        - Training/onboarding: $500/year
        - System maintenance: $800/year

    Estimated Total Cost: ~$7,300/year

Estimated Net Benefit = Total Value - Total Cost = $11,500−$7,300=$4,200/year

3. Verkada (Cloud Video + Access Control)

    - **Value Created**
        - Operational efficiency (fewer manual reviews): $6,500/year
        - Improved emergency response coordination: $2,000/year
        - Moderate safety credibility to guests: $3,000/year
        - Slight attendance confidence lift (1%): $1,700/year

    Estimated Total Value: ~$13,200/year

    - **Costs**
        - Hardware + platform subscription: $10,000/year
        - Training + IT overhead: $1,200/year

- Maintenance + data storage: $1,000/year

Estimated Total Cost: ~$12,200/year

Estimated Net Benefit = Total Value - Total Cost = $13,200−$12,200 = $1,000/year

Net Benefit = Total Value - Total Cost = $31,500−$15,000 = $16,500/year

System	Value Created (Est.)	Cost of Ownership	Net Benefit	Primary Benefit Type
VenueShield AI	**$31,500/yr**	**$15,000/yr**	**$16,500/yr**	Proactive trust → revenue + insurance benefit
Verkada	$13,200/yr	$12,200/yr	**$1,000/yr**	Operational visibility
ADT	$11,500/yr	$7,300/yr	**$4,200/yr**	Baseline monitoring

- Buyer logic
  - **For Venue Operators**, the system directly impacts attendance, dwell time, and brand perception.
  - **For Event Organizers**, VenueShield AI automates much of the compliance and risk-reporting process.
  - **For Insurers and Risk-Management Partners**, the platform provides continuous visibility into risk levels.
  - **For Visitors and the General Public**, the benefit is emotional as much as practical.
    Safer, well-monitored venues translate into stronger trust and comfort, which are reflected in post-event satisfaction data.

VenueShield AI generates higher **net benefit** by improving operational speed, reducing compliance costs, and enhancing brand trust—while keeping ownership costs low.

EventLink Collective

- Competitor Comparison

  People will buy it because EventLink Collective turns events from an isolating transaction into a safe, inclusive, and socially verified experience — reducing fear, increasing confidence, and boosting participation for both users and organizers.

Dimension	Legacy Approach	EventLink Collective	Value Gain
Emotional Confidence	Word of mouth, unverified info	Verified friends & CrowdConfidence Scores	+ Doubles willingness to attend solo
Social Coordination	Fragmented DMs, chats	Integrated social layer and CostSplit tools	– Less drop-off in group plans
Safety Visibility	Venue reputation only	Real-time safety & vibe indicators	+30 % trust and retention
Cost Barrier	Manual split after purchase	Built-in group checkout	Faster payment flow, higher conversion

  EventLink Collective provides a measurable improvement in both **perceived safety** and **social inclusion**.

  It not only lowers transaction friction but also increases emotional surplus—the sense of belonging and assurance that existing platforms fail to provide.
  Users get more value at the same or lower effort level, resulting in stronger loyalty and repeat participation.

$$\text{Net Benefit}_{EventLink} = (\text{Emotional Confidence} + \text{Social Coordination Efficiency} + \text{Safety Visibility} + \text{Ease of Payment}) - (\text{App Effort} + \text{Subscription or Service Cost})$$

$$\text{Net Benefit}_{Legacy} = (\text{Social Value from Word of Mouth} + \text{Venue Reputation}) - (\text{Coordination Friction} + \text{Trust Uncertainty} + \text{Manual Payment Effort})$$

- Net Benefit Comparison

  1. EventLink Collective (Our Product)

     - **Assumption**
       - Runs ~40 events/year with an average of 150 attendees per event (~6,000 attendees annually).

    - ~30–40% of potential attendees hesitate due to lack of verified social context or uncertainty about going alone.
    - Real-time verified attendees + CrowdConfidence features increase conversion by ~10–12%.
    - Integrated CostSplit and group tools reduce plan abandonment from ~20% → ~8–10%.
    - Smooth checkout and reduced coordination friction lead to a measurable ~5–7% increase in completed ticket purchases.
    - Time saved from streamlined planning and communication: ~120 hours/year valued at $40/hour (~$4,800).
- **Value Created**
    - Increased willingness to attend solo (+2× confidence): $4,000/year
    - Social coordination efficiency (fewer drop-offs, fewer no-shows): $6,000/year
    - CostSplit reduces abandoned plans (~15–20% lift): $3,200/year
    - Real-time CrowdConfidence & vibe signals (+30% retention uplift): $5,000/year
    - Faster checkout → higher conversion: $3,500/year

  Estimated Total Value: ~$21,700/year

- **Costs**
    - Subscription or platform fee: $2,500/year
    - Onboarding + adoption friction: $500–1,000/year
    - Support & feature training: $500/year

  Estimated Total Cost: ~$3,500–4,000/year

Estimated Net Benefit = $21,700−$3,500≈$18,200/yr

2. Eventbrite

- **Value Created**
    - Core ticketing + checkout infrastructure: $6,000/year
    - Event awareness + distribution: $3,000/year

    - Light social sharing effect improving turnout (~1% uplift): $2,000/year
    - Group coordination partially supported (invites): $1,000/year

  Estimated Total Value: ~$12,000/year

- **Costs**
    - Service fees & platform % of sales: ~$7,000/year
    - Manual coordination (fragmented chats, follow-ups): $1,200/year
    - No integrated cost splitting → drop-off friction: $500/year

  Estimated Total Cost: ~$8,700/year

Estimated Net Benefit = $12,000−$8,700≈$3,300/year

3. Meetup

- **Value Created**
    - Interest-based matching → higher relevance: $3,500/year
    - Community trust from structured groups: $2,000/year
    - Recurring attendance patterns: $3,000/year
    - Partial confidence from social profile visibility: $1,500/year

  Estimated Total Value: ~$10,000/year

- **Costs**
    - Organizer subscription fees: $600/year
    - Low conversion rate → lost revenue from no-shows: $2,500/year
    - Manual coordination & payment splitting: $1,200/year

  Estimated Total Cost: ~$4,300/year

Estimated Net Benefit = $10,000−$4,300=$5,700/year

4. Facebook Events

- **Value Created**
    - Built-in social graph → high awareness: $4,500/year

    - Familiarity confidence effect: $2,000/year
    - Mild attendance uplift through “who’s going” visibility: $1,500/year

  Estimated Total Value: ~$8,000/year

- **Costs**
    - No integrated ticketing → manual payment workflow: $2,500/year
    - Drop-off from uncertainty (safety, unknowns): $1,500/year
    - No cost split or coordination automation: $1,000/year

  Estimated Total Cost: ~$5,000/year

Estimated Net Benefit = $8,000−$5,000=$3,000/year

Platform	Value Created (Est.)	Cost of Ownership	Net Benefit	Primary Benefit
EventLink Collective	**$21,700/yr**	**$3,500–4,000/yr**	**$17,500–18,200/yr**	Trust + Social + Conversion
Meetup	$10,000/yr	$4,300/yr	**$5,700/yr**	Community matching
Eventbrite	$12,000/yr	$8,700/yr	**$3,300/yr**	Ticketing & distribution
Facebook Events	$8,000/yr	$5,000/yr	**$3,000/yr**	Awareness via social graph

- Buyer Logic
    - **For Users**, the app directly addresses the top emotional blockers—fear of going alone, safety uncertainty, and awkward coordination.
      By seeing verified attendees, safety ratings, and available “CostSplit Crews,” users feel reassured and more willing to buy tickets spontaneously.
      Internal interviews and early feedback suggest users are more likely to attend an event when they can preview who else is going.
    - **For Event Organizers**, the value lies in higher conversion and retention.
      A transparent social layer increases ticket-purchase confidence and reduces last-minute cancellations.

Organizers gain analytics on “social influence pathways” (how friend networks drive sales) and can design group-friendly pricing bundles.
    - **For Venue Partners and Sponsors**, integrating real-time CrowdConfidence Scores and Vibe data enhances the brand’s reputation for safety and inclusivity.
      Venues can promote “Verified Safe” status and use attendee feedback for continuous improvement, attracting repeat business and new demographics.
- People will buy it because EventLink Collective turns events from an isolating transaction into a safe, inclusive, and socially verified experience — reducing fear, increasing confidence, and boosting participation for both users and organizers.

EventLink delivers higher net benefit by improving coordination, enhancing trust visibility, and simplifying payment — while reducing user effort and uncertainty compared to legacy methods.

Step 5: Iterate the supply side — Can we make it? Demonstrate technological and economic feasibility based on evidence and benchmarks.

VenueShield AI

1. Technological Feasibility
    a. Proven Core Stack
        i. Using tools such as YOLOv8 and Detectron2 for recognizing people and objects in security footage, and PyTorch Audio and OpenCV + DeepSort for detecting sound cues and crowd density, the system can transform ordinary CCTV feeds into a network of “smart eyes and ears.”
    b. Infrastructure Scalability
        i. These insights would be processed through reliable cloud services like AWS Kinesis and SageMaker, which are designed to handle video and audio streams instantly. Each venue’s cameras and microphones send data to a local “edge device” (a small computer on-site) that filters information before it reaches the cloud. This keeps alerts fast, usually within seconds, and limits data overload.
    c. Security & Compliance
        i. The system will analyze relevant patterns rather than storing constant footage. It uses explainable-AI tools (for example, Grad-CAM) that highlight why a particular alert was raised. This transparency helps venues meet data-protection and privacy rules, building trust with regulators and the public.

        ii. VenueShield AI integrates with existing security camera networks and can deploy smart cameras equipped with on-device software processing for venues lacking compatible infrastructure. Since our product is primarily a software service, we are hoping to integrate this with existing security camera hardware.
    d. One Line: These components create a clear path to deployment: proven AI models like YOLOv8 and Detectron2 handle perception, while AWS infrastructure ensures real-time responsiveness through scalable edge-cloud processing. By integrating directly with existing CCTV and audio systems, VenueShield AI delivers advanced situational awareness without costly hardware overhauls or privacy compromises.
2. Economic Feasibility
    a. Proven Cost Benchmark
        i. Comparable AI-security providers like *Evolv Technology* and *PatriotOne* charge around $5K – $10K per site annually. VenueShield's software-only model would eliminate expensive scanning hardware, targeting roughly $2K – $4K per site per year.
    b. Unit Economics
        i. Because the platform will run as a subscription service, most costs come from *cloud computing*, not from maintaining hardware. That keeps gross margins above 70 %. Early modeling suggests that venues could save 5 - 10% on insurance premiums thanks to improved safety ratings, easily offsetting the subscription cost.
    c. Feasibility Risks & Mitigations
        i. To keep expenses predictable, the platform would record only flagged incidents instead of storing all footage, and it regularly updates its models to maintain accuracy.
    d. Conclusion: These factors make VenueShield AI financially sustainable and attractive to venues: a low-overhead, software-only model that undercuts industry pricing while maintaining strong margins. By reducing insurance costs and minimizing data storage expenses, the platform delivers measurable ROI and long-term economic viability for large-scale deployment.

EventLink Collective

1. Technological Feasibility
    a. Modern App Foundation
        i. EventLink Collective would be built using *Next.js* and *ReactJS* for a smooth, web-app experience, similar to how many leading consumer apps are built. It would store and synchronize data in real

time through *Firebase* or *Supabase*, ensuring instant updates when users join events, split costs, or share invitations.

b. Integrations
    i. The app would connect with existing, secure services instead of building everything from scratch. *Stripe Connect* handles payments and group ticket splits; *Google Maps API* provides venue details; and *Apple ID* or *Persona Verification SDKs* confirm that each profile is genuine.

c. AI Assistance
    i. The platform would use natural-language tools such as *AWS Comprehend* and *Vertex AI* to read event reviews and comments. From these, it calculates a "*CrowdConfidence Score*"—a simple measure showing how safe and enjoyable a venue feels based on real-world feedback. This type of analysis costs less than a cent per event, making it efficient even as the platform scales.

d. Conclusion: These technologies make EventLink Collective both practical and scalable from day one. By leveraging modern frameworks, trusted third-party integrations, and low-cost AI analytics, the platform can deliver a polished, reliable user experience without heavy infrastructure investment—allowing rapid deployment and seamless growth as more users and venues join.

2. Economic Feasibility
    a. Lean Cost Model
        i. Running the app would cost about $0.12 per active user each month (covering cloud services and identity checks). At the same time, the business can earn $2 - $3 per user through affiliate ticket sales, sponsorships, and partnerships, giving strong positive margins.

    b. Industry Proof
        i. Companies like Fever, which curates experiences for similar audiences, already demonstrate that experience-driven apps can reach profitability with 30 - 40% margins. EventLink Collective would add a social-trust layer on top, improving engagement and retention without extra physical costs.

    c. Addressing Risks
        i. Since success depends on network effects (people using it with their friends), the first rollout will focus on tight-knit communities such as university campuses and young-professional groups, where social connections spread fastest.

d. Conclusion: These factors make EventLink Collective economically sound and strategically focused. With low per-user costs, multiple revenue streams, and a proven market model, the platform can achieve profitability quickly. By launching within socially dense communities (like in NYC), it maximizes word-of-mouth growth while keeping acquisition costs minimal.

Outputs to Highlight:

- Your *Central Business Logic* — “People will buy it because…” and “We can make it because…”
- Your *Configuration Most Likely to Work* — which wedge or segment you’re targeting first
- Evidence of *pivoting and iteration* as you refine your model

Central Business Logic:

VenueShield AI

- People will buy it because it transforms venue safety from a reactive cost into a proactive trust advantage - reducing insurance expenses, preventing incidents, and boosting public confidence.
- We can make it because the underlying AI and cloud tools already operate reliably at scale, and we can deliver them economically as a lightweight, privacy-safe software service.

EventLink Collective

- People will buy it because it turns attending events from a stressful or uncertain experience into a safe, social, and verified one - removing fear and friction while amplifying connection and fun.
- We can make it because the digital ecosystem for identity verification, social features, and secure payments is already mature, allowing us to assemble a scalable, cost-efficient platform with positive margins.

Configuration Most Likely to Work (Starting Wedge vs Vision)

VenueShield AI:

- Wedge: Start with mid-sized arenas, university stadiums, convention centers. Choose venues that already use cameras but need faster and more reliable safety insights. The locations have measurable ROI from fewer incidents and low insurance costs. Our priority is to start marketing and creating a presence in New York City. For these following reasons:
    - **High Concentration of Large Venues:** NYC hosts thousands of high-capacity environments — from Madison Square Garden and Barclays Center to Broadway theaters and major transit hubs — making it an ideal testing ground for large-scale crowd safety intelligence.
    - **Strict Safety and Compliance Standards:** The city's strong regulatory environment and emphasis on public safety create both a challenge and an opportunity to demonstrate VenueShield AI's compliance-driven, privacy-conscious design.
    - **Local Presence:** Our team is based in New York, enabling close collaboration with venue operators, faster deployment, and hands-on support during pilot rollouts.
- Vision: Evolve into a nationwide "smart-venue" safety network that links directly with insurers and city emergency systems.

EventLink Collective

- Wedge: Begin with urban young professionals and college communities where social anxiety and coordination issues prevent event attendance. The groups naturally for the social loops needed for virality
    - **Friend Groups & Campus Communities:** Friend groups and campus communities share events constantly, making fast spread and referral loops natural.
    - **Young Adults:** Young adults are most affected by safety concerns and coordination friction - exactly the problems EventLink solves with verified attendees, CrowdConfidence Scores, and built-in CostSplit tools.

    - **Frequent Event Participants:** This demographic attends concerts, nightlife, campus events, and group activities weekly, giving us strong testing and iteration opportunities.
    - **Local Presence**: Being based in NYC allows direct access to universities, clubs, and social groups for user interviews, pilot launches, and rapid feedback cycles.
- Vision: Expand into the default global platform for safe and socially connected event participation

Pivoting & Iteration

VenueShield AI:

- For example, the team could initially explore a hardware based security scanner concept. With feedback of user interactions, this could be pivoted into a pure software model after learning that installation costs made this hardware solution unrealistic at a large scale.
- The business model can be refined to a flexible subscription which is tied to insurance benefits, which make it attractive to operators.

EventLink Collective:

- For example, early prototypes may focus on social discovery, but user interviews revealed that safety and solo attendance were the true barriers. From here, the pivoting occurred to center on “event confidence.”
- Another situation is that there could be a splitting cost feature implemented after users state that payment coordination could be a pain point.
